

225 Broadway NBC Building: Sewer Main Rehabilitation

Location: San Diego, California

Situation:

The 22-story office building's 8" sewer main experienced corrosion and cracks, which caused constant pipe system failures. The aged pipe is located underneath the parking garage and nearby streets, so a traditional re-pipe would be very destructive and disruptive.

Solution:

Nu Flow's no-dig, eco-friendly pipe lining solution was ideal for the customer. Our patented structural liner was installed using existing access points, so there was no digging and minimal disruption. Nu Flow's Pull-in-Place liner is an effective, long-term solution against drain pipe system failures.
