

## VA Long Beach Hospital: Sanitary Sewer Pipe Rehabilitation

Location: Long Beach, California

### Situation:

Several thousand feet of sanitary drain pipes experienced backups and cracks, as a result of age and corrosion. Some of the sewer lines are located in extremely difficult-to-access areas, so a traditional re-pipe was not a feasible solution.

### Solution:

Nu Flow's patented, trenchless pipe lining technology was the only solution for the customer. We successfully removed the corrosion in the sanitary lines, installed our patented structural drain liner and left it to cure in place. All cracks have been covered and future failures are avoided.
